

MINDY DAY · AUGUST 22, 2026

**Bad with computers.
Worse at government contracts.
Win anyway.**

If you can send a text, you can do this.

This isn't a masterclass. It isn't a tech course.

- **You won't learn another website.**

No SAM.gov digging. No market research. No guesswork.

- **You won't hire anyone.**

No consultant, no proposal writer, no BD hire.

- **You won't pay for a tool.**

Everything we do today works even if you can't spend a dime right now.

178,000+

federal opportunities tracked — rescanned every night

You wake up to the ones that fit.

I built my entire conference agenda with Mindy. I'll show you exactly how.

Today, in three parts

1

See Your Market

The map. Every federal opportunity, in one place.

2

Ask Mindy Anything

She answers inside Claude and ChatGPT.

3

Set It Up Together

Connect Mindy to your Claude or ChatGPT, live, on your laptop.

You're leaving with it working — not with notes.

SAM.gov isn't the whole market

- **It's a search box.**

You have to already know exactly what you're looking for.

- **And it's only part of the picture.**

Task orders, sole-source awards, small DLA buys and purchase-card work never post there at all.

- **Miss the keyword, miss the deal.**

One wrong search term and the opportunity never shows up.

15,085

federal opportunities open right now

~2,000 more post every weekday.

So we stopped searching. We mapped it.

A SEARCH BOX

Demands you already know what you want. Most mornings, nobody does.

A MAP

Shows you the whole market — and the work you'd never have thought to search for.

It's Zillow for federal contracts — you browse, and the market comes to you.

If it's public, we cover it

SAM.gov is one channel. Most federal buying happens somewhere else — and Mindy reads those too, every night.

- **The open solicitations**

Everything posted publicly, plus what agencies say they plan to buy next.

- **The work too small to post**

Defense parts and supply buys under the threshold that never reach SAM.gov.

- **The work already held**

Contracts someone else won — and the date they come up again.

- **The money outside contracts**

Grants, research awards, and every federal payment on record.

THE ONLY THING WE DON'T HAVE

Classified work.

If it's public record, it's in here. If it's not public, nobody has it — and anyone who says otherwise is guessing.

You're not seeing a slice of the market. You're seeing the market.

LIVE · ACT 1

Let's open the map.

getmindy.ai/opportunity-map

What's on the map right now

Not a demo dataset. This is what loads when you open it tonight.

180K

pins on the map

Every one is a real federal record.

- **126,210 — work coming up again**
Contracts someone already holds, pinned where the work is, with the date it expires.
- **28,202 — defense parts & supply**
DLA buys, most too small to ever appear on SAM.gov.
- **18,748 — what's coming**
Agency forecasts — planned buys, before they post.
- **7,037 — open right now**
Live solicitations you can still respond to today.

Zoom to your county and see what your government is buying near you.

Your market — not everyone's

Finish a 2-minute profile and Mindy filters the whole market down to the work built for you.

- **Your work**

Only the categories you actually do.

- **Your lane**

8(a), WOSB, SDVOSB, HUBZone — set-asides you qualify for.

- **Your buyers**

The agencies you already sell to.

- **Your area**

Where you can actually perform.

Most defense work gets one bidder

Mindy reads how an agency actually buys — not how it says it buys. The Department of Defense, right now:

78.6%

of awards had **one bidder**

1.9

average bidders across the board

39%

of open work is **set aside** for small
business

You are not up against the whole world. Most of the time you are up against one other company — or nobody.

Every morning, before your inbox

1

Overnight

Mindy reads every federal opportunity posted — about 2,000 a day.

2

Matched

It keeps only the ones that fit your business.

3

8:00 AM

Your briefing lands — ready to act on.

Free. Every weekday.

ACT 2

Now — Mindy comes to you.

Inside the AI tools you already use

Claude

ChatGPT

You don't have to open anything

- **Ask in plain English.**

"Who holds this contract?" "What should I charge?" — just type it.

- **In the chat you already use.**

Claude or ChatGPT. No new website to learn, no second login to remember.

- **Real answers, live.**

Mindy pulls actual federal records into the chat — not a guess.

And she picks the right source for the question.

54 things you can just ask for

You never pick one from a list. You ask a normal question and Mindy reaches for whichever it needs — sometimes several.

FIND THE WORK

Today's opportunities · grants · SBIR ·
contracts coming up for renewal · what an
agency plans to buy next

SIZE IT UP

Who holds it now · what they're paid · how
the agency spends · is it worth bidding

PRICE IT

Going labor rates · what similar work sold for
· the buyer's recent history

FIND THE PEOPLE

The small-business officer · the buying office
· companies to team with · who to call

WRITE IT

Pull the requirements out of the solicitation ·
draft the response · check it for compliance

CHECK YOURSELF

Does your capability match the market ·
what words does this market actually use ·
lessons from 743 podcast episodes

Ask in your words. She picks the tools.

I ran a real pursuit with it this week

Navy Gold Coast, four days ago. Monarch Marine Works — a Florida boat builder that had never held a federal contract. About 20 questions, three days.

IT RESIZED THE MARKET

Search “boat” and you see **\$22B**. Their actual lane was **\$282M**. They thought they were entering an ocean. It was a pond.

IT FOUND THE COMPETITION

572 companies registered. **48** actually performing. Enough room that the Navy had to set a lot aside for small business.

IT READ THE FINE PRINT

The listing said the deadline was Aug 31. The document said the small-business lot **closed Aug 13**. Already gone.

That one catch saved a client a week of work on a bid they could never have won.

Four days. Sixty sessions. Who matters?

Everyone here has walked a conference floor wondering who to talk to. This is what the plan looked like.

- **Before**

Sixty-plus sessions, four days, no idea which room mattered.

- **After**

A ranked target list — names, times, rooms, and the exact question to ask each person.

- **Then the agenda changed.**

Four days out, the PAE Maritime panel — my #1 target — was cut. Military Sealift Command became the new #1.

AND IT GOT ONE WRONG

I planned an aftermarket pitch to one command. Their own slide showed they don't buy this category at all.

A plan that admits a miss is worth more than one that pretends it had none.

A conference plan isn't a list of names. It's a live document that has to survive contact with reality.

Three times it said “I don’t know”

In the same week, on the same client. This is the part I actually want you to remember.

WHO HOLDS IT NOW?

Nobody. It was a brand-new contract with no incumbent. Mindy said so instead of naming someone plausible.

WHAT SHOULD WE CHARGE?

No data. Government rate tables price hourly labor. Boats are priced per hull. Mindy returned nothing rather than a made-up number.

WHO RUNS THIS PROGRAM?

Not in the records. That office’s people simply aren’t in public data. Empty answer, honestly given.

A tool that invents an incumbent is worse than no tool. You’d bid against a ghost.

And then we submitted it

Not a plan. Not a report. A federal response, in the government's hands, before the deadline.

- **28 requirements, pulled from the notice.**

Technical, submission, admin — each one tied back to its section.

- **Checked twice before it went.**

Zero disqualifiers. Then a second pass caught a spec answered at the wrong speed — 12 knots where they asked for 10.

- **Submitted Wednesday, before noon Pacific.**

Monarch Marine Works' response to the Navy's Special Mission Vessel RFI — their first federal submission ever.

FROM THE NAVY, THE NEXT DAY

“Received, thank you!”

— PAE Maritime, Department of the Navy

That is the whole point. Not a smarter search — a submitted bid.

LIVE · ACT 2

Watch it answer.

Same question. Claude, then ChatGPT.

Real data. Nothing made up.

MINDY

Every answer traces to a real federal record — SAM, USASpending, GSA. If it's not there, Mindy says "nothing found" instead of guessing.

GENERIC AI

Confidently invents a rule, a deadline, or a company that doesn't exist — and sounds just as sure either way.

A confident wrong answer costs you the bid.

Your business stays yours

You'll upload your capability statement and past performance. Here is what happens to it.

- **Nobody else can see it**

Locked to your account by the database itself — not just by our code.

- **It never trains an AI**

Your documents are never used to improve a model someone else can ask.

- **Take it with you**

Export everything in one click, any time. No support ticket.

- **Delete it for good**

Every record and every file, permanently, whenever you decide.

getmindy.ai/app/trust — every promise there points at shipped code.

ACT 3

Now let's walk through the installation.

Laptops open. We install it together, step by step.

First — the address you'll paste

This is what you paste into Claude or ChatGPT so it can reach Mindy. One line, same for everybody.

```
https://mcp.getmindy.ai/mcp
```

FOLLOW ALONG — WITH SCREENSHOTS

Every step is written out with screenshots at getmindy.ai/mcp/setup — open it on your phone and follow along. You'll make a free Mindy account partway through; no card, 100 credits to start.

Claude — the short one

- 1 **Settings** → **Connectors** — under “Customize” in the sidebar
- 2 Click **Add** → **Browse connectors**, search **mindy**
- 3 Click the orange **Connect to Claude** button
- 4 Make your free Mindy account → click **Allow**
- 5 Set Read-only tools to **Always allow** — so it stops asking every time

Don't see it in the directory? Add custom connector → paste the address.

ChatGPT — a few more steps

You'll see an "elevated risk" warning at step 1 — that's ChatGPT's standard notice for any custom tool. Continue.

- 1 **Settings** → **Security and login** → turn on **Developer mode** — nothing works until this is on
- 2 Go to **Plugins**, click the **+** at top right
- 3 Name it **Mindy**, paste the address, set Authentication to **OAuth**, click **Create**
- 4 Click **Sign in with Mindy** → make your free account
- 5 Choose **Allow low-risk actions** when it asks about permissions

Both tools end the same way: you sign in. That's what links it to your account.

Now prove it works

Type this into whichever one you just set up. If you get a real answer, you're done.

TRY THIS

"Mindy, what federal opportunities opened this week for [what your business does]?"

IF NOTHING HAPPENS

ChatGPT: developer mode is probably still off. Claude: close and reopen it. Either one: make sure you finished the sign-in step — that's the one everybody misses.

It's working. Now hand it to someone.

There's a link in your account. When someone you send it to signs up and signs in, you both get credits.

1

Grab your link

Account → Refer & earn → Copy link.

2

Send it

To another small business owner who's been told this is too complicated.

3

You both get 100

Credits land once they finish signing in. Up to 25 people.

The person who taught you this had to figure it out alone. Nobody else should have to.

The first place you look, every morning.
